Frontend Developer — React · Next.js | Tashkent, Uzbekistan

asilbekxoliyorov441@gmail.com · +998 93 755 04 12 · t.me/asilbek_xoliyorov

Summary

Frontend Developer with 2 years of commercial experience building production web applications with React, Next.js and TypeScript — landing pages, admin dashboards and customer-facing products. At Onlayn Hamshira (home-healthcare platform, 11,000+ users) built the client web app, shipped from one codebase to the web and the Click and Sino superapps, and an HR platform that onboards new medical specialists. Focused on scalable architecture (Feature-Sliced Design), fast and responsive interfaces, real-time features and multi-language UX. As Head Mentor at PDP Junior, has taught frontend to 200+ students.

Experience

Frontend Developer, Onlayn Hamshira

Jun 2026 – Present

On-demand home-healthcare platform — 11,000+ users, 300+ active nurses, 13,000+ completed orders.

Client web app & superapp mini-apps · app.onlaynhamshira.uz

- Built one Next.js 15 codebase that runs as a web app and as mini-apps inside the Click and Sino superapps — one release updates all three platforms, so the team doesn't build and support separate apps.
- Structured the app with Feature-Sliced Design (FSD) on React 19 and TypeScript — each feature lives in its own layer with clear import rules, so new features are added without breaking existing code.
- Handled server data with TanStack React Query and Axios (caching, stale-while-revalidate, request deduplication) and client state with Zustand — screens open instantly from cache and the backend gets fewer repeated requests.
- Added live order status updates with Socket.IO and address / location screens with Yandex Maps — users see order changes without refreshing the page.
- Built OTP login and validated forms with React Hook Form and input-otp, a multi-language UI with i18next, and responsive layouts with Tailwind CSS 4 that work on phones inside superapps and on desktop.
- Sped up loading with code splitting, lazy loading, image optimization (next/image, sharp) and SVG components (SVGR), and set up PostHog event tracking to show where users drop off in key flows.

HR platform for medical specialists · hr.onlaynhamshira.uz

- Built a landing page and a candidate dashboard with React and Tailwind CSS that take nurses, doctors and other specialists through 7 steps — sign-up, screening, lessons and tests, video, documents — moving first-round screening online so HR reviews only candidates who passed the earlier checks.
- Kept each step in its own state module (React Context providers for screening, education and video) with saved progress and autosave, so candidates can leave and continue later without losing answers.
- Built SMS OTP sign-up with resend timer and rate-limit handling, a screening questionnaire with required questions and review before submit, and lessons with mini tests and a final test (attempt limits, retake cooldown).
- Built in-browser video recording with the device camera (MediaDevices / MediaRecorder API), with fallback to phone camera or gallery upload when access is blocked, and checks for length, size (up to 500 MB), format (MP4, MOV, WebM) and sound before upload — fewer unusable videos reach HR.
- Built document upload (required / optional files, limits, replace, rejection reasons) and a profile form with passport data and region → district selection; the whole site works in Uzbek (Latin and Cyrillic) and Russian, with light and dark mode.

Head Mentor, PDP Junior (*Bektemir branch*)

Mar 2026 – Present

IT education center — frontend development courses.

- Lead frontend education at the Bektemir branch as Head Mentor, coordinating lessons and keeping teaching quality consistent across groups.
- Have taught frontend development to 200+ students — from HTML, CSS and JavaScript basics to building interfaces with React.
- Teach through hands-on practice: students build real projects step by step instead of only learning theory.
- Review students' code and give clear feedback, helping them build clean coding habits and prepare for real work.

Skills

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3

Frontend: React 19, Next.js 15, Tailwind CSS 4

Data & State: TanStack React Query, Zustand, Axios, REST APIs, Socket.IO, Yandex Maps, Firebase, PostHog

Forms & UI: React Hook Form, i18next, Swiper, Lottie, React Toastify, Ant Design Icons

Browser & UX: camera video recording and upload, OTP flows, form autosave, i18n (uz-Latn, uz-Cyrl, ru), light / dark theme, responsive design

Architecture: Feature-Sliced Design (FSD), one codebase for web and Click / Sino superapp mini-apps

Performance: code splitting, lazy loading, image optimization (sharp), bundle-size optimization · **Tools:** Git, ESLint, SVGR

Education

Tashkent State University of Economics (TSUE) — Bachelor's in Economics (by sectors and industries)

2019 – 2024

Najot Ta'lim — Frontend Development course

2023 – 2024

Languages

Uzbek — native · English — working proficiency
